

The Park At Quail Creek Satellite Installation Guidelines

In accordance with FCC regulations, you have the right to install a satellite without pre-approval from the Architectural Control Committee. However, the Park's Homeowner's Association also has the right to impose restrictions upon the installation of satellites. *In order to prevent fines and the costs of additional installation fees or repairs, we strongly recommend that you consult with the Architectural Control Committee prior to satellite installation.* Please submit an ACC request to the management office prior to any satellite installation.

Placement Preferences:

- Town home patio area.
- Town homes outside wooden wall with the equipment being no higher than 6 feet above the highest roof peak on a building's end wall.

CORRECT:

Dishes/antennas should NOT be placed on the front of the building unless there is no other way to receive a signal. It is recommended to mount the equipment to the fascia board directly below the roofline.

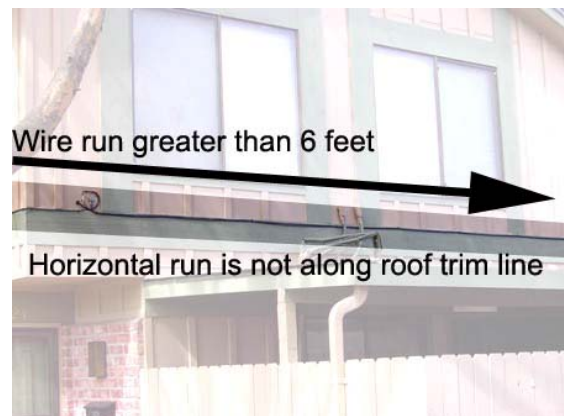

INCORRECT:

The following applies to both satellite dishes and/or antennas:

- No equipment may be mounted on any roof, brick wall, lawn or chimney of any town home or in any common area. *NOTE: FCC rules allow the HOA to prohibit satellite dishes and antennas from being mounted in these locations.*
- A mounted dish shall be no more than one meter (39.37") in diameter.
- The entrance for the wire/cable connecting a dish or antenna mounted on an outside wooden wall shall be no more than six (6) feet below the dish.
- Vertical runs of wire/cable are only allowed next to the edge of the wall's vertical trim.
- Horizontal or lateral runs must only be next to the roof trim line.
- Wire/cable must be secured properly to the wall no more than every three (3) feet.

INCORRECT:

****Please review these guidelines with installers prior to installation.****
